Water drops

Have you ever seen a ocean? Or played at an ocean? Or surfed at an ocean? Oceans or important to the fishes and whales and are important to the world.

You can find oceans
anywhere but you
have to go to a beach
to find them. There
also fun to play
at the beach.

Did you hear anything?

Many animals live in the ocean such as sharks, whales and coral reefs. They can be big or small .
some are slow or quick . There are also seaweed .

OH NO!!!!

The shrimp uses the sun and the tuna eat's s shrimp the shark eat's t tuna the the orca eat's the shark.

Don't
touch
me!

In the oceans some fish have Adaptation. in adaptations is how animals survive. the Puffer fish survives by poison in it's body. so when predator attacks fish bowls up scare it away do you think puffer fish are amazing? and the

Wobegong shark has camouflage and on it's mouth it has something that looks like sea weed so when a fish comes close the Wobegong shark grabs the fish and eat's do you think Woblgong sharks are amazing?

Extinction!!

Many people throw away sigarett buds. On the the beach it will look all black. We can protect the ocean by picking up trash and then throw it away .And don't smoke . At the beach if you go go fishing too much all of many fish will die. And that will be bad you also can save the ocean.By making a group to help the ocean please don't litter the ocean.

The authors name is Adrian and has made one more book and right now living in south Korea . And is form Japan and America I hope you liked this book.

Glossary

Adaptation is how animals survive

Predators is when a animal eat's a another animal

Camouflage means that in animal can look like something else
