# Welcome to grasslands

Have you seen a grassland before? I have not seen a grassland before but I have seen one on Google.

# Adapta tion

In grass lands living things have a adaptation. An adaptation is that animals adopt the environment survive. one example is, crocdiles camouflage in the river to wait its prey.

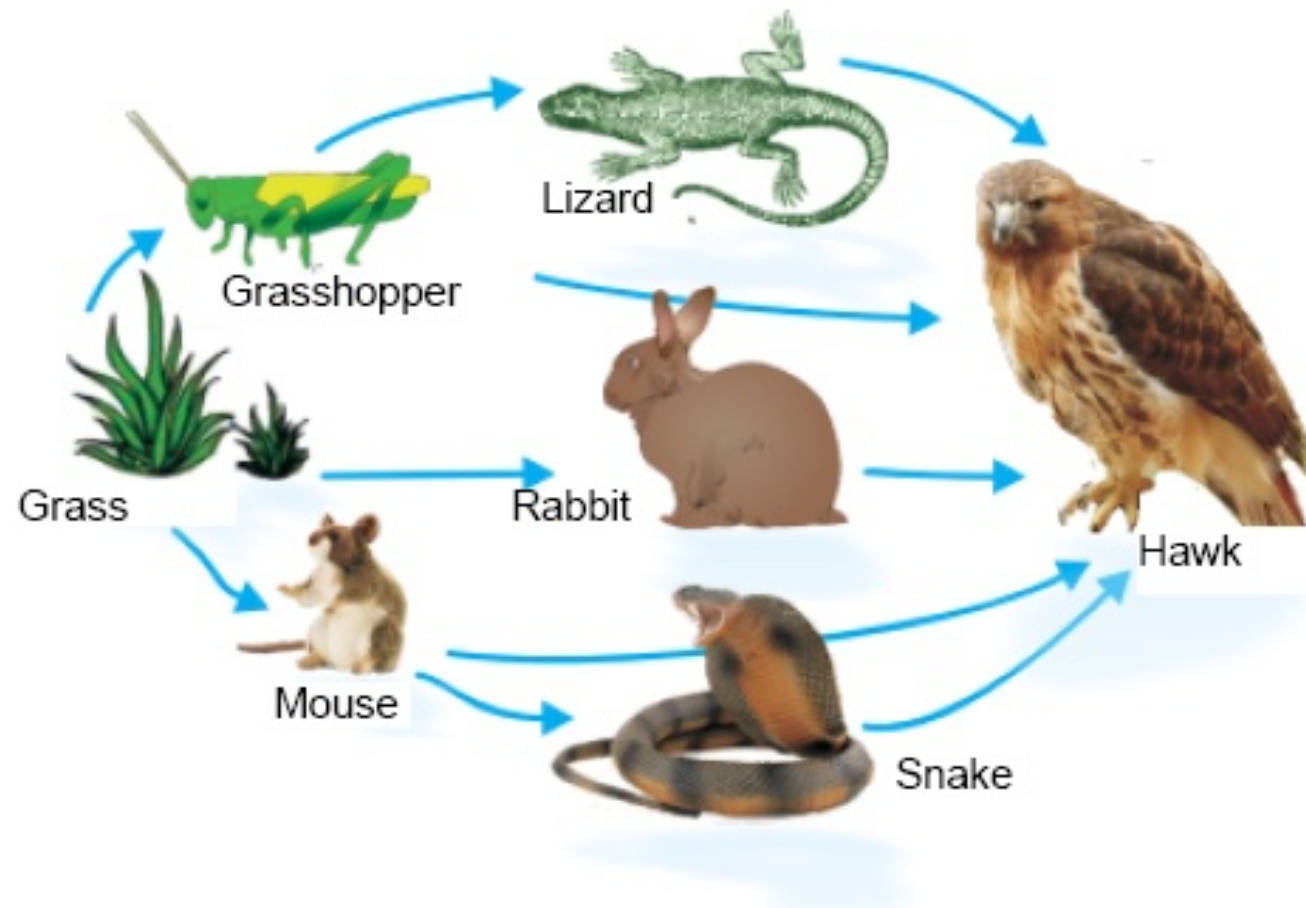

## How to protect the grasslands

Grasslands are important to people and animals. Farmers cut a lot of grass to grow crops like corn and wheat. We don't cut grass because the grassland food chains are disappearing.

# Food chain in the grassland

Like the food chain shows that the grasshopper eats grass, lizard eats the grasshopper, and hawk eats lizard.

# About the author

Hi. I am Anneliese Iren mosses. I'm in the first grade at BIFS. I'm 8 years old. I wrote about the grassland. I worked hard on my book. I hope you enjoy and learn something about the grassland in my book.

# Glossary

Adaptation: animals camouflage to blend in with their surroundings
