Can you believe this	1
Why does it rain so much in the rain forest.....	2
Animals and plants that live there	3
Adaptation's in the rain forest.....	4
Threats to the jungle.....	5

Can you believe this?

A chameleon can change colors what ever they touch! This help's them blend in so his predators don't eat him.when a Animal blend's in it is called camouflage.

Why does it rain so much

It rains in the rain
forest because it is cold
and gloomy. At night it
is colder and rains very
hard

Animals and plants that live in the rain forest

Jaguars live in the rain forest. And so do parrots. I'll tell you what plants live there too. tomato plants live there too. and melon's live there too.

What is green?

What has thousands of trees?

It is an rain forest!

A rain forest is green a rain
forest has lots of trees!

Rain forest adaptation's

An adaptation is a thing that helps animals survive. Every animal has a adaptation.

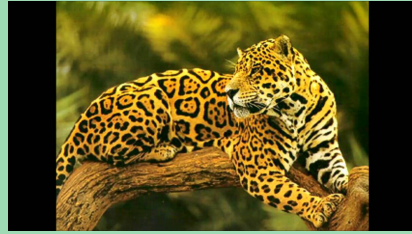

Cut down to many trees

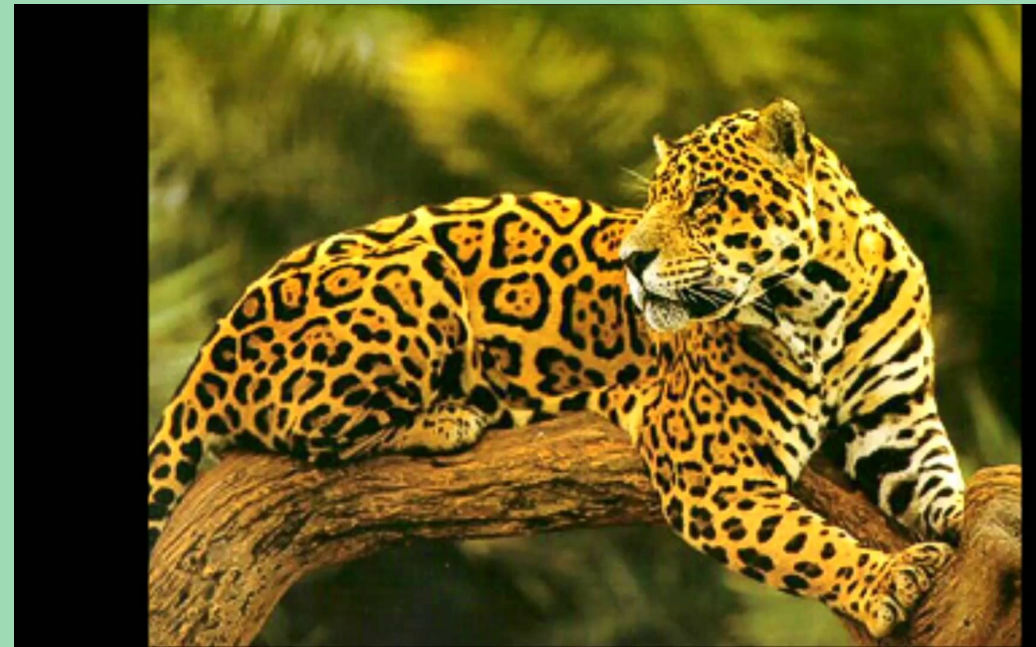

Cut less trees down

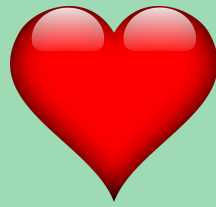

Rain forest's are beautiful and green but If you cut down to many trees that will all go away please don't cut to many trees

Rain forest food chain

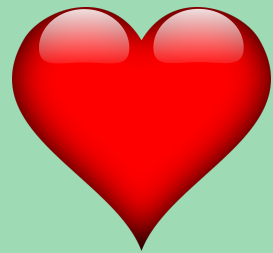

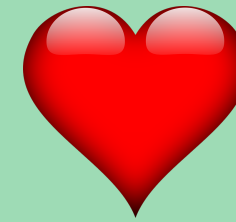

Jaguars are at the top of the food chain because they have sharp teeth and sharp claws. Jaguars are a type of cat.

About the author

A girl named Ellie Kate Melville wrote this book I have a sister and her name is Izzy Ranay Melville when I made this book I was in Korea also I made this book in Busan International Foreign School. My teacher is Ms. Emily. I wrote about rain forest's because I got inspired by the nature there.

Glossary

Gloomy mean's foggy
and gray.

Survive mean's stay
alive!

A food chain is like a jaguar eat's a deer and the deer eat's Barry's and the Barry's get there energy by the sun.
