Welcome to the Desert

What can be hot and what can be cold? Where are lots of sand? Where can you find cactuses? The answer is desert.

Animals and plants in the desert

There are lots of animals live in the desert like snakes, foxes, lizards, bats, and eagles. Plants like cactus also live in the desert.

What is a desert?

Have you been to deserts? Most people think that deserts are sandy and have nothing. But there are a lot of animals and plants like cactus.

3

How animals eat?

Food Chain: Desert

cactus → ant → snake → fox

This is the food chain in the desert. Ants eat cactus snacks eat ants and foxses eat snacks.

Adaptation in the desert

Adaptation is that animals camouflage to blend in their surroundings. One example is a snake that camouflage in rocks to catch preys.

5

Threats to the deserts

People kill animals in the desert and the number of animals are decreased. People keep wild goats. People keep goats for milk and wool. But the goats eat all the grass. We should not kill the animals in the desert.

About the author

Hello! My name is Leopold and I am in the first grade. I go to BIFS and I am 7 years old. I wrote about desert. I worked hard on my book. I hope you enjoy reading my book!
