1

Are forests the same?

What kind of forests have you seen? A forest is a place where there is lots of trees. Are forests all the same? No! Forests are not the same.

2

Why is the frog poisonous?

The dart frog try's to warn the predators not to eat it. The bright blue color is making the predators know it is poisonous.

3 Where do we find tropical forests?

We find tropical forests in South America, Africa, South East Asia. Tropical forests are hot and sticky. Tropical forests grow in the aqader.

5 Threats to the Rainforest

There are many threats to the rainforest. The biggest threat is HUMAN DEFORESTATION. More than half of Earth's rainforests have already been lost. About a fifth of the Amazon rainforest has been lost to the deforestation. People cut trees for fire to make electricity, paper.
